RARA polymerase beta subunit (EC 2.7.7.48) (Large structural protein)
(L protein)
                                                                                                                                                                                                                                                                                                                                                                                                                                    MEDLINE=8730982; PubMed=3035486; Emmerson P.T.; Milar N.S., Chambers P., Emmerson P.T.; Vusial 200982; PubMed=3035486; Milar N.S., Chambers P., Emmerson P.T.; Milar N.S., Chambers P., Sendal and Vesicular stomatitis viruses."; Nucleic Acids Res. 15:396(1-397).

-I. FUNCTION: Probable component of the active polymerase. It may function in mRNA synthesis, capping, methylation and poly(A) synthesis of newly synthesis of newly synthesized viral mRNAs, RNA editing of the Pendent transcript, and protein kinase activity.

-I. ÇATALITIC ACTIVITY: N nucleoside triphosphate = N diphosphate +
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      -!- SIMILARITY: Belongs to the paramyxoviruses L protein family.

INVOLVED IN MAINTENANCE OF CDCZ KINASE ACTIVITY. IT IS
SUBSEQUENTLY REQUIRED FOR REGULATION OF SEFTUM FORMATION.

C. INVOLVED IN MAINTENANCE OF CDCZ KINASE ACTIVITY BY PREVENTING, DIRECTLY OR INDIRECTLY, THE DESTADATION OF CYCLIN OR THE DEHOSPHORYLANION OF THR. 167 OF CDCZ.

C. INVALVE SIMILARITY: Contains 1 Rab-GAP TBC domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This SWISS-PROT entry is copyright. SIMILARITY: Belongs to the cation transport ATPases family (P-type
ATPases). Subfamily IV.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        "The DNA sequence and comparative analysis of human chromosome 20.";
Nature 414:865-871(2001).
-!- CATALYTIC ACTIVITY: ATP + H(2)O = ADP + phosphate.
-!- SUBCELUTAR LOCATION: Integral membrane protein (By similarity).
                                                                                                                                                                                                                                                                                                                                 TISSUE-Brain;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ô
                                                     Nature 390:580-586 (1997).

-!- CATALYTIC ACTIVITY: D-glyceraldehyde 3-phosphate + pho
-!- NAD (+) = 3-phospho-D-glyceroyl phosphate + NADH.
-!- PATHWAY: Second phase of glycolysis; first step.
-!- SUBGINIT: Homotetramer (By similarity).
-!- SUBGINIT: Belongs to the glyceraldehyde 3-phosphate dehydrogenase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         58.1%; Score 36; DB 1; Length 335; 60.0%; Pred. Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 38, Application US/08434831B
Patent No. 6113905
GENERAL INFORMATION:
APPLICANT: Libkin, W. I.
APPLICANT: Schneider, Patrick A.
APPLICANT: Schneemann, Anette
APPLICANT: Schneemann, Anette
TITLE OF INVENTION: Borna bisease viral Sequences,
TITLE OF INVENTION: System Diseases
NUMBER OF SEQUENCES: 59
CORRESPONDENCE ADDRESS:
ADDRESSEE: Rulbright & Jaworski, L.L.P.
STREET: 865 SOUTH Figueroa Street, 29th Floor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Score 38; DB 3; Length 509;

Treatment of human tumors, using a combination of radiation and a non-radiolabeled protein receptor tyrosine kinase inhibitor.

Disclosure, Page 15; 31pp; English.

This sequence is the hypervariable region CDR3 (complementarity determining region 3) of the heavy chain of a single chain antibody derived from the murine antibody 225. The invention relates to a method for inhibiting the growth of tumours in human patients by treating with an effective amount of a combination of radiation and a non-radiolabelled protein receptor tyrosine kinase (PRTK) inhibitor, the overexpression of which can lead to tumourigenesis. The method can be used in the treatment of tumours of e.g. breast, lung, colon, kidney, bladder, head and neck, ovary, prostate or brain. The administration of a suitable antibody to

¥.

The method involves treating the patient with a combination of BGFR/human EGF-1 (HER1) antagonist, optionally with a chemotherapeutic agent or radiation. The antagonist can BGFR/HRR1 attagonist is useful for inhibiting the growth of refractory tumours such as tumours of breast, heart, lung, small intestine, colon, spine, bone marrow, blood, thymus, uterus, testicles, cervix and liver, preferably squamous cell carcinomas. The present sequence represents the heavy chain variable region complementarity determining region 3 amino acid sequence of the chimeric anti-EGFR monoclonal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Epidermal growth factor receptor/human epidermal growth factor receptor-1 antagonist for inhibiting the growth of refractory tumors.

The method involves administering an antibody or a defective receptor that is an antagonist of a member of the EGF receptor family, or a combination of the rantagonist and photocherapy, chemotherapeutic agent or radiation therapy. The attibody used in the method of the invention acts as an epidermal growth factor receptor (EGFR) antagonist by inhibiting EGFR /HERI phosphorylation. The method of the invention is useful for treating a mammal with hyperproliferative disease such as psoriasis, actinic keratoses, seborrheic keratoses, warts, keloid scars and eczema simulated by a ligand of a member of the EGF family of receptor. This sequence represents the mutine anti-EGF 255 antibody heavy chain (VH) hypervariable region (CDR3) used as an inhibitor of EGFR in the method of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Treating a mammal with hyperproliferative disease especially psoriasis, stimulated by ligand of member of epidermal growth factor family of receptors, by administering antagonist of the receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
Mouse; heavy chain; antibody; hyperproliferative disease; epidermal growth factor; EGF; psoriasis; actinic keratosis; seborrheic keratosis; warts; keloid scars; eczema; 255 antibody; hypervariable region; CDR3; EGFR inhibitor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       th 100.0%; Score 62; DB 5; Length 11; Similarity 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is the heavy chain variable region of the reshaped human monoclonal antibody (MAb) H255, 225HB. The MAb is specific for the human motoclonal antibody (MAb) H255, 255HB. The MAb, so a fragment, can be used to inhibit the growth of tumour calls, especially late stage special to tumour calls in humans, optionally conjugated to a cytotoxic agent, especially doxorubicin, taxol or cisplatin, or a signal transduction, ras or cell cycle inhibitor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  - nsed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Chimeric and humanised versions of anti-EGF receptor antibody 225 for inhibiting tumour growth, esp. of late stage prostatic tumour.

The MAb is specific for the human epidermal growth factor (EGF) receptor. The MAb, or a fragment, can be used to inhibit the growth of tumour cells, especially late stage agent tumour cells in humans, optionally conjugated to a cytotoxic agent, especially doxorubicin, taxol or cisplatin, or a signal transduction, ras or cell cycle inhibitor
                                                                                                                                                                                                                                                                                                                                                                                                                                                  Chimeric and humanised versions of anti-EGF receptor antibody 225 - used for inhibiting tumour growth, esp. of late stage prostatic tumour.

```
The present sequence is the heavy chain variable region of the reshaped human monoclonal antibody (MAD) H225, 225RHB. The MAD is specific for the human epidermal growth factor (EGF) receptor. The MAD, or a fragment, can be used to inhibit the growth of tumour cells, especially late stage prostatic tumour cells in humans, optionally conjugated to a cytotoxic agent, especially doxorubicin, taxol or cisplatin, or a signal transduction, ras or cell cycle inhibitor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Chimeric and humanised versions of anti-EGF receptor antibody 225 for inhibiting tumour growth, esp. of late stage prostatic tumour.

The MAb is specific for the human epidermal growth factor (EGF) receptor. The MAb, or a fragment, can be used to inhibit the growth of tumour cells, especially late stage prostatic tumour cells in humans, optionally conjugated to a cytotoxic agent, especially doxorubicin, taxol or cisplatin, or a signal transduction, ras or cell cycle inhibitor

Heavy chain, reshaped, monoclonal, antibody, 225RA, human, epidermal growth factor, EGF, receptor, inhibition, growth, tumour, cell, late stage, prostatic, prostate, variable region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is the heavy chain variable region of the reshaped human monoclonal antibody (MAb) H252, 228HA. The MAb is specific for the human monoclonal antibody (MAb) H252, 228HA. The MAb, or a fragment, can be used to inhibit the growth of tumour cells, especially late stage prostatic tumour cells in humans, optionally conjugated to a cytotoxic agent, especially doxorubicin, taxol or cisplatin, or a signal transduction, ras or cell cycle inhibitor
                                                                                                                                                                                                                                                                                                                                                                                           Chimeric and humanised versions of anti-EGF receptor antibody 225 for inhibiting tumour growth, esp. of late stage prostatic tumour.
                                                         Heavy chain variable region of 225RA antibody.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is the heavy chain variable region of the reshaped human monoclonal antibody (MAD) H225, 225RHE. The MAD is specific for the human epidermal growth factor (EGF) receptor. The MAD, or a fragment, can be used to inhibit the growth of tumour cells, especially late stage prostatic tumour cells in humans, optionally conjugated to a cytotoxic agent, especially doxorubicin, taxol or displatin, or a signal transduction, ras or cell cycle inhibitor

The present sequence is the heavy chain variable region of the murine monoclonal antibody (MAD) M225, which is specific for the human epidermal growth factor (EGF) receptor. The MAD, or a fragment, can be used to timbibt the growth of tumour cells, especially late stage prostatic tumour cells in humans, optionally conjugated to a cytotoxic agent, especially doxorubicin, taxol or cisplatin, or a signal transduction, ras or cell cycle inhibitor. (Updated on 27-AUG-2003 to correct OS field.)
      Chimeric and humanised versions of anti-EGF receptor antibody 225 - used for inhibiting tumour growth, esp. of late stage prostatic tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Bivalent fusion proteins that bind epidermal growth factor receptor or analogues - and comprise at least two different cell surface binding domain(s), useful for tumour therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Single chain antibody; scFv; monoclonal antibody; MAb; EGF; epidermal growth factor; receptor; antitumour; cancer; therapy.

                                                                                                                                                                                                                                                                                                                          The present sequence is the heavy chain variable region of the chimeric monoclonal antibody (MAD) C225, which is specific for the human epidermal growth factor (EGF) receptor. The MAD, or a fragment, can be used to inhibit the growth of tumour cells, especially late stage prostatic tumour cells in humans, optionally conjugated to a cytotoxic agent, especially doxorubicin, taxol or cisplatin, or a signal transduction, ras or cell cycle inhibitor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Heavy chain; murine; mouse; monoclonal; antibody; M225; human; epidermal growth factor; EGF; receptor; inhibition; growth; tumour; cell; late stage; prostatic; prostate; variable region.
                                                                                                                                                                                                                                                   Chimeric and humanised versions of anti-EGF receptor antibody 225 - used for inhibiting tumour growth, esp. of late stage prostatic tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

scFv(225) (AAW05133) comprises the single-chain binding region of murine monoclonal antibody 225, which is specific for the human epidermal growth factor receptor. It is encoded by plasmid pWW152-225 (see also AAT42033), constructed by cloning MAD 225 VH and VL region cDNAs into plasmid pWW152. Novel bivalent proteins (see also AAW05134-44), some of them including scFv(225) and an effector e.g. cytotoxin, can be produced in bacterial host cells, and are useful as antitumour agents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Single chain antibody, scPv; monoclonal antibody; MAb; EGF; epidermal growth factor; receptor; plasmid pSW202-225; cancer; therapy; antitumour; exotoxin A; ETA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Bivalent fusion proteins that bind epidermal growth factor receptor or analogues - and comprise at least two different cell surface binding domain(s), useful for tumour therapy.
                                                                                                                                                                                                                                                                                                                  Query Match 100.0%; Score 62; DB 2; Length 240; Best Local Similarity 100.0%; Pred.         scFv(225)-ETA (AAW05135) comprises the single-chain binding region (see also AAW05133) of murine moncelonal antibody 225, which is specific for human epidermal growth factor receptor, joined to exotoxin A (ETA). It is encoded by plasmid growth factor see also AAT42035) obtd. by ligating an scFv(225) gene (AAT42033) into plasmid pSW200 contg. the Pseudomonas acruginosa PAK ETA gene. The construct can be used to produce novel bivalent fusion proteins (see also AAW05136-44) in bacterial host cells, for use as antitumour agents

                                                                                                                                                                                                                      scFv2(225/FRP5)-ETA (AAW05140) comprises the single-chain binding region of murine monoclonal antibody 225 (specific for human epidermal growth factor receptor, see also AAW0513) Joined to portions of exocorin A from Pseudomonas aeruginosa and to the single-chain binding region of murine monoclonal antibody FRP5 (specific for human epidermal growth factor receptor exbB-2, see also AAW05134). It is encoded by plasmid pMS238-225-5 (AAT42040). This plasmid can be utilised in the prodn. of the bivalent fusion protein in bacterial (sep. B. coli) host cells. Such fusion proteins (see also AAW05138-44) are useful as antitumour agents
                                                                                                   Bivalent fusion proteins that bind epidermal growth factor receptor or analogues - and comprise at least two different cell surface binding domain(s), useful for tumour therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Single chain antibody; scFv; monoclonal antibody; MAb; EGF; erbB-2;

ocFv2(FRP5/225)-ETA (AAW05139) comprises the single-chain binding region of murine monoclonal antibody FRP5 (specific for human epidermal growth factor receptor erbB-2, see also AAW05134) joined to portions of exotoxin A from Pseudomonas aeruginosa and to the single-chain binding region of murine monoclonal antibody 225 (specific for human epidermal growth factor receptor, see also AAW05133). It is encoded by plasmid pMS228-5-225 (AAT42039). This plasmid can be utilised in the prodn. of the bivalent fusion protein in bacterial (sep. E. coli) nost cells. Such fusion proteins (see also AAW05138-44) are useful as antitumour agents
                                                                                                                                                                                                                                                                                                                                                                                                          Bivalent fusion proteins that bind epidermal growth factor receptor or analogues - and comprise at least two different cell surface binding domain(s), useful for tumour therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
